Rapid population of contact address information for GoldMine®

- A utility to help you enter address details quickly and accurately in GoldMine® 5.x, GoldMine BCM®, and GoldMine Sales & Marketing®.
- Quarterly updates of the Postcode Addressing File are provided to keep your database of postcode lookups right up-to-date.
- Uses GoldMine's® own interface – no separate dialog boxes to complete.
- Part of a suite of tightly integrated utilities designed to maximise your GoldMine® installation.

Rapid Data Entry and Postcode Validation for GoldMine®

What's it for?

The UK postcode system identifies areas & districts and, if complete, it allows you to uniquely identify a small number of addresses in a street or block of flats, requiring only the house name or number to be added.

When capturing data during a telephone call or in a call centre environment, speed of entry is crucial. These days managers expect agents to be able to rapidly complete full address information directly from postcodes.

With QAS Postcode Validation For GoldMine® you simply type the house number and postcode on the contact record and the address is completed for you.

QAS for GoldMine® - Designed for GoldMine® 5.x, GoldMine BCM®, and GoldMine Sales & Marketing®

GM-QAS Addressed

Company: G Down & Co
Contact: Richard Head
Dept: Purchasing Dept. Last: Head
Title: Head Buyer First:
Source: Seminar Asst:

Add1: 1 Peppercorn Close
Add2:
Add3:
City: Peterborough
County: Cambridgeshire Country:
Postcode: PE1 2DU Merge:

Lots of contact records to be created manually from hard copy?

Less than perfect standards in terms of keyboard skills and spelling?

Let QAS for GoldMine® take the strain!

Save time and reduce errors on data entry when collecting new data.

An indispensable and easy-to-use tool for rapid data capture over the telephone and in Call Centre environments.

In the example above the user typed the postcode 1pe12du - and the software took care of the rest!
